Professional Profile

DevOps Engineer with 5 years of experience automating deployments, maintaining cloud infrastructure and configuring CI/CD pipelines. Strong background in Docker, Kubernetes, AWS, Terraform, Linux and monitoring systems.

Technologies

Cloud	AWS EC2, S3, RDS, IAM, CloudWatch
Containers	Docker, Docker Compose, Kubernetes
Infrastructure as Code	Terraform
CI/CD	GitHub Actions, Jenkins, GitLab CI
Monitoring	Prometheus, Grafana, ELK Stack
Scripting	Bash, Python

Work Experience

DevOps Engineer | CloudOps Agency, Remote | August 2021 - Present

- Created and maintained CI/CD pipelines for multiple development teams.
- Dockerized frontend and backend applications.
- Configured Kubernetes deployments, services and ingress resources.
- Managed AWS infrastructure through Terraform.
- Implemented monitoring and alerting with Prometheus and Grafana.

System Administrator | NetSolutions, Zenica | January 2019 - July 2021

- Maintained Linux servers and web application environments.
- Configured Nginx reverse proxy and backup routines.
- Supported developers during manual and automated deployments.

Selected Projects

CI/CD Pipeline for Microservices

Technologies: GitHub Actions, Docker, Kubernetes, AWS

- Configured build, test and deployment stages.
- Automated deployments to staging environments.
- Added Docker image publishing and rollback strategy.

Infrastructure as Code Setup

Technologies: Terraform, AWS, Linux

- Defined EC2, RDS and S3 resources as code.
- Introduced environment-specific Terraform configuration.
- Documented infrastructure and deployment processes.

Education

Bachelor of Computer Science, University of Zenica, 2014 - 2018

Soft Skills

- Reliability
- Systematic thinking
- Working under pressure
- Proactivity
- Process documentation
- Cross-team collaboration
